

IN THE SPECIFICATION

Please amend the specification as follows:

1. In the title:

METHOD AND APPARATUS FOR CONTROLLING RESULT DATASET

GENERATION IN A JAVASCRIPT JavaScript ENVIRONMENT

2. At page 10, lines 3-15:

In the preferred implementation, the JavaScript parser and objects are integrated into the MAPPER engine to support JavaScript stored procedures. The integrated JavaScript parser interprets and executes JavaScript stored procedures, which utilize custom JavaScript objects. These custom capabilities in an object-based, paradigm for dataset manipulation and analysis purposes. Additional custom JavaScript objects are also provided to support the more complex MAPPER core engine ~~"power"~~ power function analysis capabilities. JavaScript stored procedures are an alternative to MAPPER run-script, input and output arguments can be passed, and a resulting dataset can be returned to the caller

A key to making this process efficient is the technique for "parameterization" of the underlying MAPPER ~~"power"~~ power commands. In order to leverage the more complex MAPPER core engine "power" function analysis capabilities, it is necessary for the programmer to supply a set of arguments. The arguments are positional and the number can range from just a few to many dozens. As the number of arguments increases, the burden of programming them can become unmanageable.
